That assessment shall take into account the effectiveness of the measure in terms of its expected results, its implementation, international adherence to and informal alignment with the price cap mechanism, and its potential impact on the Union and its Member States. It shall respond to developments in the market, including possible turbulences.

On the basis of that report, the functioning of the price cap mechanism, including Annex XXVIII as well as the prohibitions in paragraphs 1 and 4 of this Article, shall be reviewed by the Council.

The national supervisory authority shall consult the Commission and, where appropriate, the European Central Bank and shall take a decision accordingly. The national supervisory authority may approve the retention of an additional percentage only after having determined that it is strictly necessary to comply with risk management requirements in view of the impact due to the war in Ukraine with regard to the assets held by central securities depositories. If the national supervisory authority has approved an additional percentage, that percentage shall become definitive in respect of that financial year, unless the Commission decides, within five days after notification, that the additional percentage does not comply with the conditions set out in this point. Amounts provisionally retained which have been used in accordance with this point shall cease to be due to the Union. Any information provided or received in accordance with this paragraph shall be used exclusively for the purposes for which it has been provided or received.

▼**M30**

(e) If amounts provisionally retained have not been used within five years for the purpose referred to in point (d), the national supervisory authority shall, after consulting the Commission and, where appropriate, the European Central Bank, determine whether those amounts or part of those amounts are still needed to meet risk management requirements in view of the impact due to the war in Ukraine with regard to the assets held by central securities depositories. The national supervisory authority shall notify the Commission without delay about its decision on determination of those amounts and the time for which those amounts may continue to be retained. The decision of the national supervisory authority shall become definitive unless the Commission decides, within five days after notification, that the conditions set out in this point are not complied with. The Commission shall consult the European Central Bank to that effect. Amounts no longer retained shall be transferred to the Union.

(f) The central securities depositories shall transfer to the Union all remaining unused amounts provisionally retained at the latest when the restrictive measures under this Article are discontinued. The national supervisory authority may, after consulting the Commission and, where appropriate, the European Central Bank, decide to retain the amounts thereafter if those amounts or part of those amounts are still needed to meet relevant risk management requirements in view of the impact due to the war in Ukraine with regard to the assets held by central securities depositories. The decision of the national supervisory authority shall become definitive unless the Commission decides, within five days after notification, that the conditions set out in this point are not complied with. The Commission shall consult the European Central Bank to that effect. Amounts no longer retained shall be transferred to the Union.

11. Central securities depositories referred to in paragraph 8 shall submit to the Commission and to their national competent authorities, in accordance with the rules set out in the act referred to in paragraph 13 the interim financial reports and the audited annual financial statements.

Technical Note: For the purpose of X.A.III.101:

1) "Asynchronous transfer mode" ("ATM") is a transfer mode in which the information is organised into cells; it is asynchronous in the sense that the recurrence of cells depends on the required or instantaneous bit rate.

2) "Bandwidth of one voice channel" is data communication equipment designed to operate in one voice channel of 3 100 Hz, as defined in CCITT Recommendation G.151.

3) "Communications channel controller" is the physical interface that controls the flow of synchronous or asynchronous digital information. It is an assembly that can be integrated into computer or telecommunications equipment to provide communications access.

4) "Datagram" is a self-contained, independent entity of data carrying sufficient information to be routed from the source to the destination data terminal equipment without reliance on earlier exchanges between this source and destination data terminal equipment and the transporting network.

5) "Fast select" is a facility applicable to virtual calls that allows data terminal equipment to expand the possibility to transmit data in call set-up and clearing "packets" beyond the basic capabilities of a virtual call.

6) "Gateway" is the function, realised by any combination of equipment and "software", to carry out the conversion of conventions for representing, processing or communicating information used on one system into the corresponding, but different conventions used in another system.

7) "Integrated Services Digital Network" (ISDN) is a unified end- to-end digital network, in which data originating from all types of communication (e.g., voice, text, data, still and moving pictures) are transmitted from one port (terminal) in the exchange (switch) over one access line to and from the subscriber.

8) "Packet" is a group of binary digits including data and call control signals that is switched as a composite whole. The data, call control signals, and possible error control information are arranged in a specified format.

▼**M36**

9) "Common channel signalling" means the transmission of control information (signalling) via a separate channel than that used for the messages. The signalling channel usually controls multiple message channels.

10) "Data signalling rate" means the rate, as defined in ITU Recommendation 53-36, taking into account that, for non-binary modulation, baud and bit per second are not equal. Bits for coding, checking and synchronization functions are to be included.

11) "Dynamic adaptive routing" means Automatic rerouting of traffic based on sensing and analysis of current actual network conditions.

12) "Media access unit" means equipment that contains one or more communication interfaces ("network access controller", "communications channel controller", modem or computer bus) to connect terminal equipment to a network.

Technical Note: For the purpose of X.E.III.101:

1) "Synchronous digital hierarchy" (SDH) is a digital hierarchy providing a means to manage, multiplex, and access various forms of digital traffic using a synchronous transmission format on different types of media. The format is based on the Synchronous Transport Module (STM) that is defined by CCITT Recommendation G.703, G.707, G.708, G.709 and others yet to be published. The first level rate of "SDH" is 155,52 Mbits/s.
